

Johnson Matthey Fine Chemicals Division

With operations in Europe and North America, Johnson Matthey Fine Chemicals Division brings together the expertise of four world class business units that provide an integrated drug development and production service which is operated to the highest standard of cGMP, as well as specialist Research Chemical business, Alfa Aesar.

The division's Macfarlan Smith (UK) and West Deptford (USA) business units provide a full range of developmental and commercial scale manufacturing services for APIs to the international pharmaceutical industry. Both businesses specialise in the manufacture of low volume, high value compounds, especially controlled drugs.

Pharma Services (USA) provides contract research, development and manufacturing services to pharmaceutical companies from pre-clinical through to commercial launch.

The Research Chemicals business is a globally integrated catalogue based supplier of speciality inorganic and organic chemicals. It operates under the Alfa Aesar brand name and is based in the UK, USA, Germany, China and India.
